Animal Protection

• How do turtles and chameleons protect themselves?

Animal Protection

While You Read How do skunks keep predators away?

And have

一日本のないのであるのであるというである

Do you get scared sometimes? Do you run or hide? Animals do that too. But some animals stay safe in other ways.

03

Skunks use a stinky smell to keep predators away. It is called musk. They **stamp** their feet, **lift** their tail, and spray the musk. The smell can stay for days. Armadillos use **armor** to keep predators away. Armadillos are the only mammals with hard shells. But some parts of their armor can move. That is how they **curl up** into a ball.

> Porcupines use **spikes** to keep predators away. They are called quills. Porcupines can lift their sharp quills. The quills **stick** into predators. And then they are hard to take out. Ouch!

Comprehension Check
